**To whom it may concern,**

Tiger Machinery has worked on various projects with IPU, most notably on Sakhalin Island where conditions are extremely hostile, using their air and hydraulic starting systems for the larger Caterpillar engines.

We consider IPU to be extremely competent and reliable in the field of engine starting, whether it be air or hydraulic systems, supplying well conceived products, technical and field support, advice and timely deliveries of parts and consumables.

I have no hesitation in recommending IPU.

Yours sincerely,
